# SET YOUR DEVICE TO INTERNET SHARE
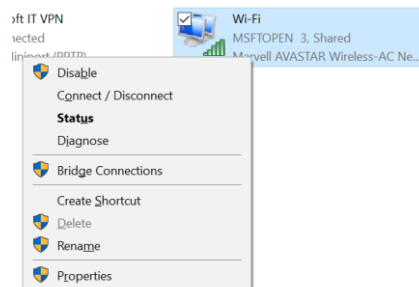

STEP-BY-STEP INSTRUCTIONS

1. Right click on the Windows Start Button and choose 'Network Connections'

2. Find the network you are currently connected to: **for example Wi-Fi**

3. Now right click that network and choose 'Properties'

4. On the Network Properties Menu select the Sharing Tab and make sure the first tick box is checked (and optionally the second as well)

5. Now on the Network Connections window your Wifi should have keyword 'Shared' next to it and then you can connect another device (such as an IoT device) via Ethernet cable.
